This BitTorrent client can be used on Windows, Linux, and Mac operating systems. Let's start up our BitTorrent application and start downloading. As the software is currently downloading it's a good time to explain some of the many features that ByteOMeter can offer. Smart Playlist One of the most useful features ByteOMeter comes with is a Smart Playlist. Smart playlists automatically find all your music and video files and organize them into several folders and playlists for you. By default, ByteOMeter uses two playlists: ⬚ Music Folder ⬚ Video Folder These playlists contain a ton of useful metadata. In this app, we can set up these folders and playlists by default. There's also an option to add custom playlists. Metadata includes ID3v2, Metadata, Album Art, Song Artist and Song Info. Let's go ahead and try it out. Ok, I'm going to create a new playlist called "Songs", as you can see. Now, I'm going to drag all the songs I have in my library and drop them into the playlist. We have a ton of options when it comes to song metadata, but we're just going to focus on the Track Name and Artist. This will be a playlist called "Songs". We can customize the name of the playlist. Now that we've created this playlist, we'll start to see our custom playlist. Let's refresh our library and take a look. In case you're curious, there are over 2,200 songs in our "Songs" playlist. We can quickly navigate through all the songs with the small search box at the top. If you want to know what the names of the songs are, you can use the second search box. This should be super helpful when your using
